

Pyramid's Point

Objective

Take part in and enjoy outdoor and adventurous activity challenges both individually and within a team.

Equipment

- 10 cones

Preparation

- Set out a pyramid consisting of four cones at the base, followed by three cones, two cones and culminating in one cone at the point of the pyramid.
- Split the children into groups of 11 and ask 10 of the children to position themselves next to a cone in the pyramid.
- There should be one child left and they will be the 'Leader'.

Instructions

- The Leader will instruct the individual children where to move.
- Provide the group with the rules of the challenge:
 - The group must turn the pyramid upside down, so the point is moved underneath the base of the pyramid (180 degree turn).
 - The group must complete the challenge in three moves.
- The challenge is completed by moving the two children/ cones at each end of the base of four to join the row of two.
- Then move the point from the top of the pyramid to the bottom and this will create a new pyramid.
- You can alternate the leader if the group are struggling to solve the challenge.

Other information

- Allow the group to move more than three times.
- Add another layer of cones underneath the base to make the challenge harder.
