

# Skeleton Treasure Hunt

## Objective

Identify and label the main parts of the human body, including head, neck, arms, elbows, legs, knees and feet.

## Equipment

- Enrich School Orienteering Maps
- Skeleton Parts Activity Sheet
- Body Part Labels Activity Sheet

## Preparation

- Prior to the start of the lesson, you will need to visit the control points you are planning to use and place a bag containing copies of the skeleton parts from the Skeleton Parts Activity Sheet at each one.
- Split the children into small groups and provide each of the groups with an Enrich School Orienteering Map.
- Provide the group with an explanation of the map's main features e.g. which control points are included, start / finish point, out-of-bounds, open land, playground etc.

## Instructions

- Groups must start and finish the activity in the same location. Give each group a different control point to visit first.
- Groups must navigate around the school site using their maps to locate each of the identified control points and collecting one piece of the skeleton from each one.
- Children must only collect one piece of the skeleton at each location and the group must stay together as they visit each control point.
- Once the group have visited each of the control points and collected a skeleton part at each one, they must return to the start location.
- They then work together to combine the skeleton parts to make a full skeleton and use the labels provided to identify each part of the body.

## Other information

- As additional support, some groups could be provided with an example of a completed skeleton to help them use their individual skeleton parts to create a full skeleton.
