

Multilink Addition up to 10

Objective

To reinforce knowledge of number bonds up to 10.
To subitise numbers up to 10.

Equipment

- Enrich Phonics and Number Markers
- Activity Sheet
- Multilink cubes (optional)

Preparation

- Pupils could do this activity in pairs.
- Provide each pair with an activity sheet and a pencil.
- (Alternatively, activity sheets could be laminated, and pupils use a whiteboard marker to complete).
- Pupils could do this activity by using the Multilink images on the activity sheet.
- They could also use a set of physical multilink cubes to recreate the images on the activity sheet as they do the activity. (If so, provide each pair of pupils with a basket/bag containing enough multilink cubes to recreate the images as they carry out the activity.)

Instructions

- For each sum on the activity sheet, pupils count / subitise the numbers that the Multilink shapes represent.
- They add the two numbers together and write in the answer to the sum.
- They then find the control marker which has the image that is next to the sum. The number on the left hand side of the control marker (from 1-10) is the correct answer to the sum.
- They use the number from the control marker to check their answer.
- They continue until they have completed each of the sums on their activity sheet in this way.

Other information

- Pupils could complete and check the sums on their activity sheet, one at a time.
- Alternatively, they could complete all of the sums on the activity sheet and then check all of their answers by locating the control markers and looking at the number on each marker.
- For teachers, there is a set of images of the 10 Phonics and Number control markers to accompany this activity.
